

Breakwater DSAR Response

Perform DSAR response on unstructured data to drive insight and compliance.

Breakwater DSAR Response™ helps organizations comply with GDPR, CCPA/CPRA, and other privacy regulations. It compliments and augments your existing DSAR compliance system by extending your ability to locate and act upon customer data within your enterprise.

Because GPDR allows individuals to request a full list of personal data that an organization stores on them, searching standard databases is not sufficient. Structured data systems, like customer relationship management, marketing automation, ecommerce orders and transactions are relatively easy to search and export targeted customer data. The reality is that this data is often exported by employees for other tasks, typically for importing between systems, or performing data cleansing or analysis on their local computers. As a result, customer data can often be found on laptops, files stores, content repositories, and collaboration systems. This is where Breakwater can help.

Key capabilities include:

- Data inventory
- Data mapping across employees, departments, locations, and systems
- Data flow analysis using lineage

Benefits

Comply with your privacy obligations

Adhere to GDPR, CCPA, and any other regulations that require you to know what's in your data and how it flows through your organization and beyond. Delete all customer data upon request and prove compliance.

Privacy by design

Confirm what's in your data, where it lives, who's accessing it, and how it's being used.

Identify privacy breaches

Immediately identify what's been breached and notify subjects. Provide personal data and confirm its history to respond to regulators and consumers.

Highlights

- Data inventory
 - Data mapping
 - Data flow analysis
 - Data lineage
 - Data actions
 - Rapid deployment
 - Rapid results

Key Features

Rapid deployment and execution

Using a cloud-first SaaS deployment model allows for deployment and execution in hours instead of weeks. Auto discovery activity can be controlled to minimize network and system impact. Breakwater Inventory supports more than 1,600 file types and supports a variety of storage and content management systems.

Data identification and categorization

Breakwater Inventory delivers complete visibility into your data landscape and empowers you to harness your data for total command and control. Identify any content anywhere, including customer and employee PII, client account data, HIPAA-related data, source code, intellectual property and trade secrets, contracts, and junk/ROT content. Use automated categorization, including machine learning to accelerate and optimize categorization.

Data lineage

Our data lineage capabilities use patent-pending, future-forward blockchain technology, which has emerged as a core building block for next-generation data and governance frameworks. Breakwater Inventory's data lineage capabilities chains documents together, detect branching and provide immutable and reliable auditing for the entire document lifecycle from creation to disposal.

Data actions

Execute actions based on your analysis. Actions can be permanent or temporary and targeted by employee, department/organization, location, system, file type, and classification. Actions include mask, delete, alert, and quarantine.

About Breakwater

Breakwater helps mitigate risk and gain insight from sprawling information by combining technology automation and human expertise. Our expert consulting, software, and managed services address the challenges within information governance, disputes and investigations, regulatory compliance, privacy, and cybersecurity. Our solutions allow governance, legal, and risk professionals to locate, access, analyze, and manage information by making data transparent and actionable. Breakwater helps clients in public and private sectors mitigate risk, improve productivity, and increase profitability by transforming how they use data.
